# Rocket® MultiValue Integration Server

## Modernize MV applications using REST APIs to extend business reach and technology options

MultiValue Integration Server (MVIS) is a free tool for Rocket® UniVerse and Rocket® UniData® customers on maintenance, that will help you extend business opportunities, expand your workforce with younger developers, and get products to market faster. MVIS allows you to easily expose both your MV data and business logic as RESTful APIs. Plus, its cloud-ready deployment options help you minimize total cost of ownership for modern MV applications.

## Benefits/Features

**Get new apps and features to market faster**
Quickly and easily modify and enhance applications to address end-user demands, cope with competition, and attract new market opportunities.

**Ensure optimized user experiences**
The MVIS architecture ensures availability, for a better user experience, by using Connection Pools and supporting HADR and elastic scaling.

**Ensure 24x7x365 availability**
Your customers will experience 24x7x365 application availability, even for applications with heavy demands. MVIS provides the resilient connections to make that possible.

**Minimize Total Cost of Ownership (TCO)**
Deploy automatically with flexible and efficient deployment options. MVIS gives you fast, efficient development, and set-it-and-forget-it deployment.

**Harness flexible deployment options**
You can deploy MVIS in the cloud, on-premises, or in a hybrid-cloud configuration. You can also run MVIS as a container for a more lightweight solution.

**Avoid production downtime**
Update software without worrying about data loss and end users' experience thanks to graceful failover.

# What our customers have to say

## With Rocket MVIS you can:

**Develop and use APIs**
Its low-/no-code model makes it easy to unlock business logic and data by creating APIs/Swagger definitions.

**Quickly enhance your MV app**
Update existing apps and create new ones using modern frameworks and languages.

**Keep MV relevant**
Swagger integration gives non-MV developers the ability to understand what the API is doing.

**Deploy new features faster**
Create services using the web interface or programmatically for quick, reliable deployment.

**Deploy zero-install web apps**
No need to package and distribute for different OSs. Deploy a web app accessible via a browser.

**Capitalize on business opportunities**
Quickly and easily create a new API to integrate with a new business partner.

## Why partner with Rocket Software?

| Deployment flexibility |
| Web application | Mobile application | B2B application |
| DevOps functionality |
| Cloud friendly | MVIS |
| Supports 24x7x365 uptime | MV Servers (UniVerse, UniData) — u2py |
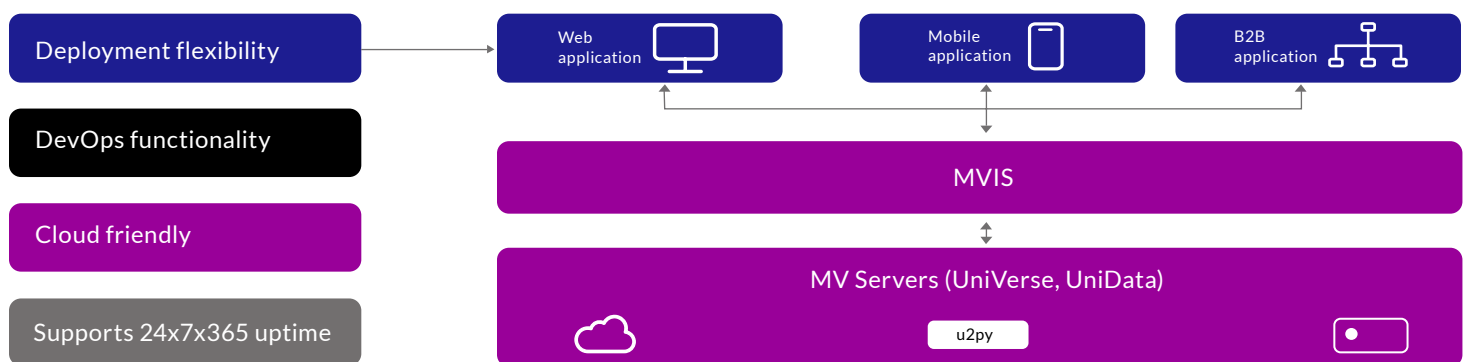

## The future won't wait—modernize today.
