Rocket® Uniface Migration Services

Future-proof
your software assets

The problem

In today's security-conscious world, keeping up to date is your best policy for staying safe. Whether you need to update your platform/database, adopt encrypted communications, remain on a supported version, or boost your development with the Uniface 10 IDE - migrating your application is the first step. So what's holding you back? There's a good chance it's uncertainty: about what should be done, about the best approach, and about what the outcome will be.

The solution

Rocket® Uniface Migration Services

Rocket can help remove these uncertainties, by guiding and helping you through the migration process and carrying out several of your most pivotal tasks. Modeled and delivered by Uniface experts, Rocket Uniface Migration Services supports and accelerates the following five steps of a successful Uniface application migration:

Step 1: Intake

We (you and Rocket) reach an agreement on the project aim, objectives, and deliverables. This creates a clear and collaborative approach to the migration process that best leverages our services.

Step 2: Analysis and planning

Set the stage for a successful migration with a clear understanding of the tasks involved, the level of effort required, and any potential constraints with Rocket Uniface Migration Analysis Service. You only need to provide our migration team with an export of your Uniface application(s). Next, our Rocket Uniface experts analyze your application code in our environment to identify necessary migration changes. Together, we review the application environment and potential dependencies and bottlenecks, then we build a corrective strategy. With this fixed-price service, you receive expert analysis and guidance, a Migration Technical Report that outlines mandatory and recommended migration prerequisites and activities, and, where identifiable, the estimated level of effort. We'll highlight areas where you'll gain an advantage by leveraging other Rocket Uniface Services, and we'll provide a proposal for them.

Rocket® Uniface Migration Services provides a proven, rapid path to the latest Uniface version.

Migrating your application to the latest Uniface version doesn't need to be stressful or expensive. With Rocket Uniface Migration Services, you can quickly utilize the latest technological innovations that end-users and IT staff both welcome, speeding up the migration process, reducing effort, and enforcing consistency.

Rocket's unrivaled knowledge of the Uniface environment means you get reliable, future-proof software. And while we take care of migration tasks for you, your team can keep their focus on giving your internal and external customers the business functionality they need.

Step 3: Migration

Expedite this step confidently with the Rocket Uniface Application Code Migration Service. Just give our team the latest export of your (error-free) Uniface application(s) and our Rocket Uniface experts migrate the source code in our environment. We then provide you with the migrated source, an updated Migration Technical Report, and relevant counsel. For example, we may highlight non-Uniface components, such as C code or batch scripts, that need attention. You address these out-of-scope issues and if necessary, apply any code changes that have happened during the migration.
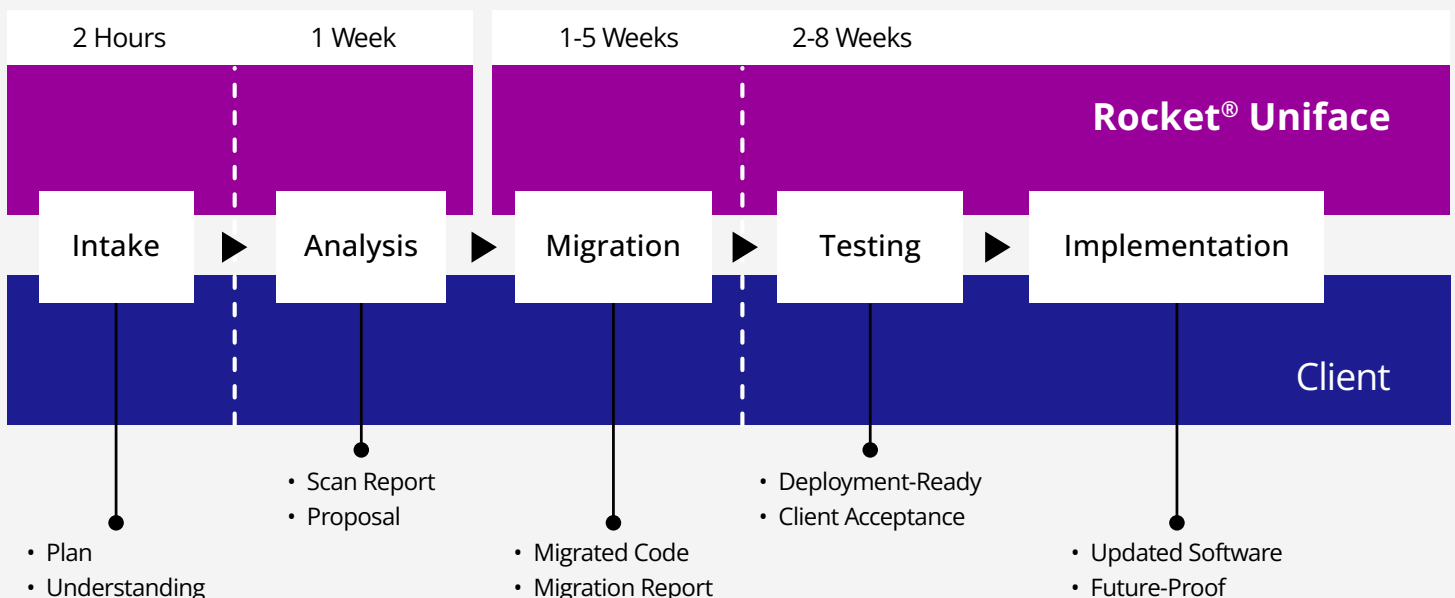

Step 4: Testing

You'll want to test the migrated application(s). Because the Rocket Uniface Application Code Migration Service includes support for testing, our experts can work with you to resolve code migration issues that testing might reveal. You also test the deployment of the new version of Uniface in your environment. Our Rocket Uniface Application Deployment Assistance Service has you covered for this step (and the next) should you need deployment assistance and infrastructure advice.

Step 5: Implementation

You're ready to deploy the migrated Uniface application(s) in the production environment. And Rocket is here to assist, offering best practice implementation and infrastructure guidance with our Rocket Uniface Application Deployment Assistance Service.

Why Rocket® Uniface Migration Services?

Transparent and predictable

We analyze the migration tasks at a fixed price, working with you to build a plan and an estimate for the T&M migration services rightsized for your needs.

Thorough and complete

We cover all known migration points across the whole application, enabling us to anticipate and prevent runtime issues and deliver robust and reliable code.

Low-cost and efficient

Our team includes Uniface pros, experienced in migration. Expect fast, reliable results so you don't need a long code freeze.

High quality and proven

Our experience means you get a consistent, quality migration.

About Rocket Software

Rocket Software partners with the largest Fortune 1000 organizations to solve their most complex IT challenges across Applications, Data and Infrastructure. Rocket Software brings customers from where they are in their modernization journey to where they want to be by architecting innovative solutions that deliver next-generation experiences. Over 10 million global IT and business professionals trust Rocket Software to deliver solutions that improve responsiveness to change and optimize workloads. Rocket Software enables organizations to modernize in place with a hybrid cloud strategy to protect investment, decrease risk and reduce time to value. Rocket Software is a privately held U.S. corporation headquartered in the Boston area with centers of excellence strategically located throughout North America, Europe, Asia and Australia. Rocket Software is a portfolio company of Bain Capital Private Equity. Follow Rocket Software on LinkedIn and Twitter.

The future won't wait—modernize today.
